ABOUT ME

Software Engineer with 5+ years of experience in front-end, back-end, and mobile application development. Experienced in designing, developing, and maintaining business applications, marketplace platforms, and travel systems, as well as implementing workflow automation using n8n. Skilled in system integration, API development, payment gateway integration, and VPS management. Strong analytical, problem-solving, and communication skills with experience leading development teams and delivering reliable software solutions.

WORKING EXPERIENCE

Senior Software Engineer • PT. Ihram Fajar Travelindo (May 2023 - Present)

- Led a team of developers in designing and developing a marketplace web application using Laravel 11.
- Managed VPS infrastructure, including server configuration, application deployment, monitoring, and maintenance.
- Coordinated development activities and provided technical guidance to team members.
- Collaborated with stakeholders to define product requirements and translate business needs into technical solutions.

Freelance Flutter Developer • PT. DSAA Group (January - March 2024)

- Collaborated with a team of developers to design and develop a Flutter application using Provider and GraphQL Client.
- Managed application release and updates on Google Play Store, including versioning and deployment.
- Performed testing and debugging to ensure application quality.

Freelance Web App Developer • CV. Sola Gracia (March - May 2023)

- Designed and developed accounting and employee management web applications using Laravel 9.
- Performed debugging, maintenance, and system enhancements to ensure application stability and quality.

Front-End Developer • PT. Tripedia Global Adventura (February 2022 - March 2023)

- Collaborated with a team of developers to develop new features for a web application using Vue.js.
- Designed and developed backend services and APIs using Laravel 8.
- Performed debugging and maintenance to ensure application stability and quality.

Staff of Data and Information Management Division • Yayasan Satu Karsa Karya (January 2020 - December 2021)

- Developed new features for company profile website using Laravel 5.
- Monitored system performance and performed debugging to ensure website stability.

Portfolio

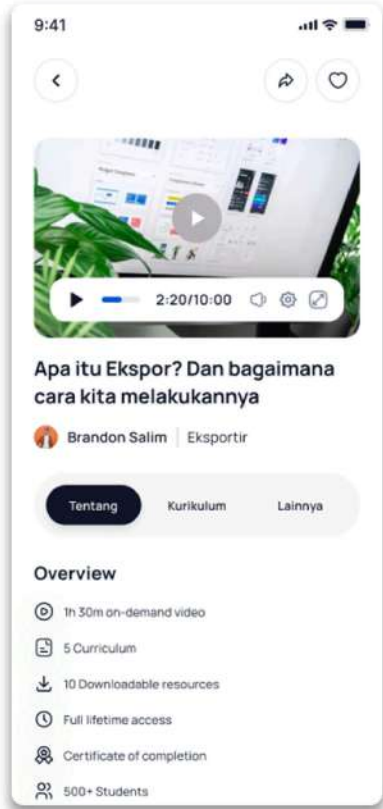

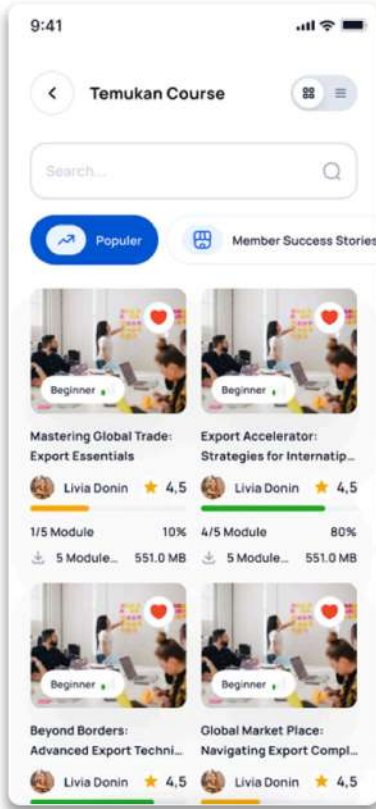

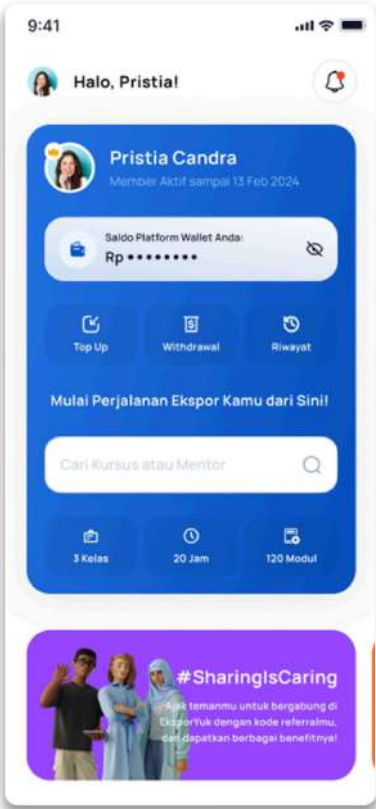

Muh Syaiful Adli

Web / Mobile Developer

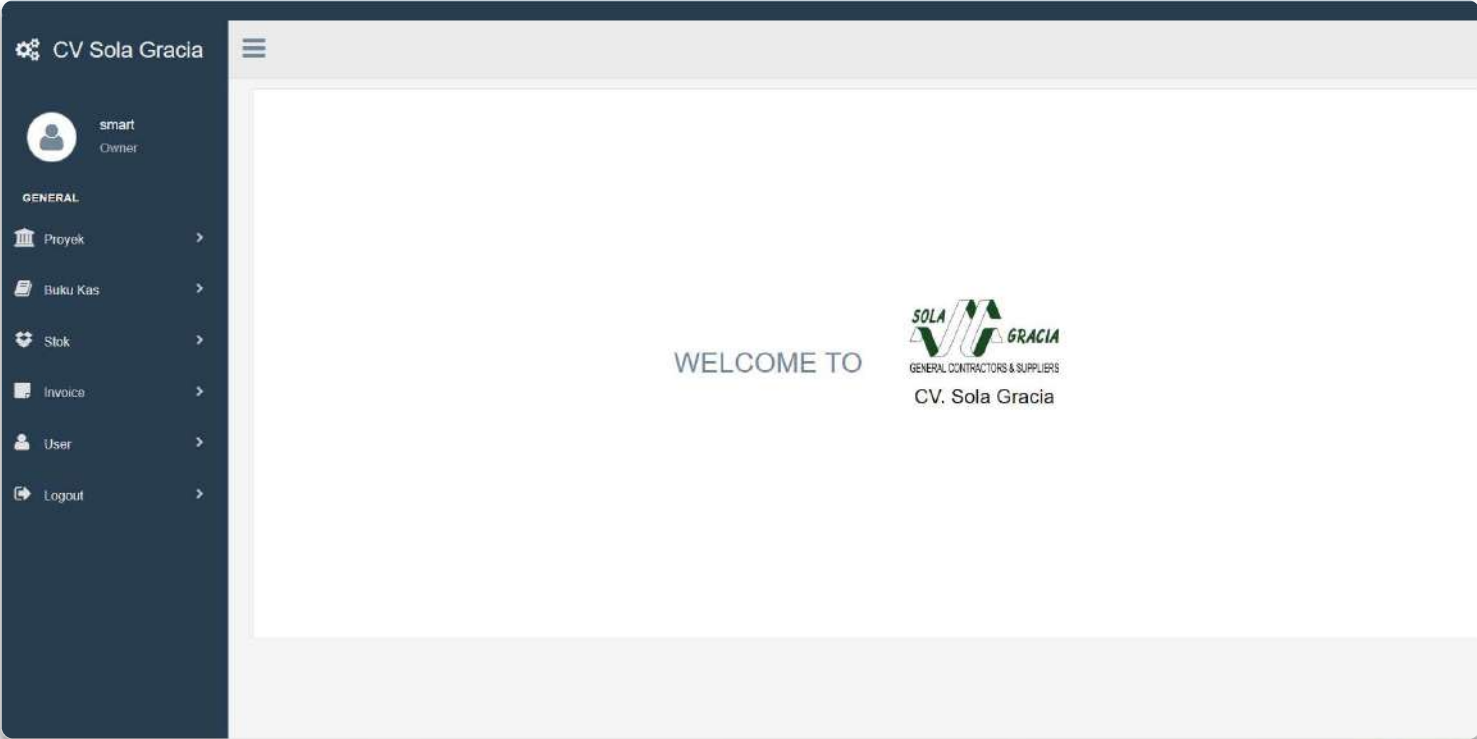

Ihraman.com Marketplace

A web marketplace platform designed to connect customers with Umrah and travel-related services. The platform provides product management, transaction processing, user management, and administrative tools to support business operations. Built using Laravel 11 and Bootstrap.

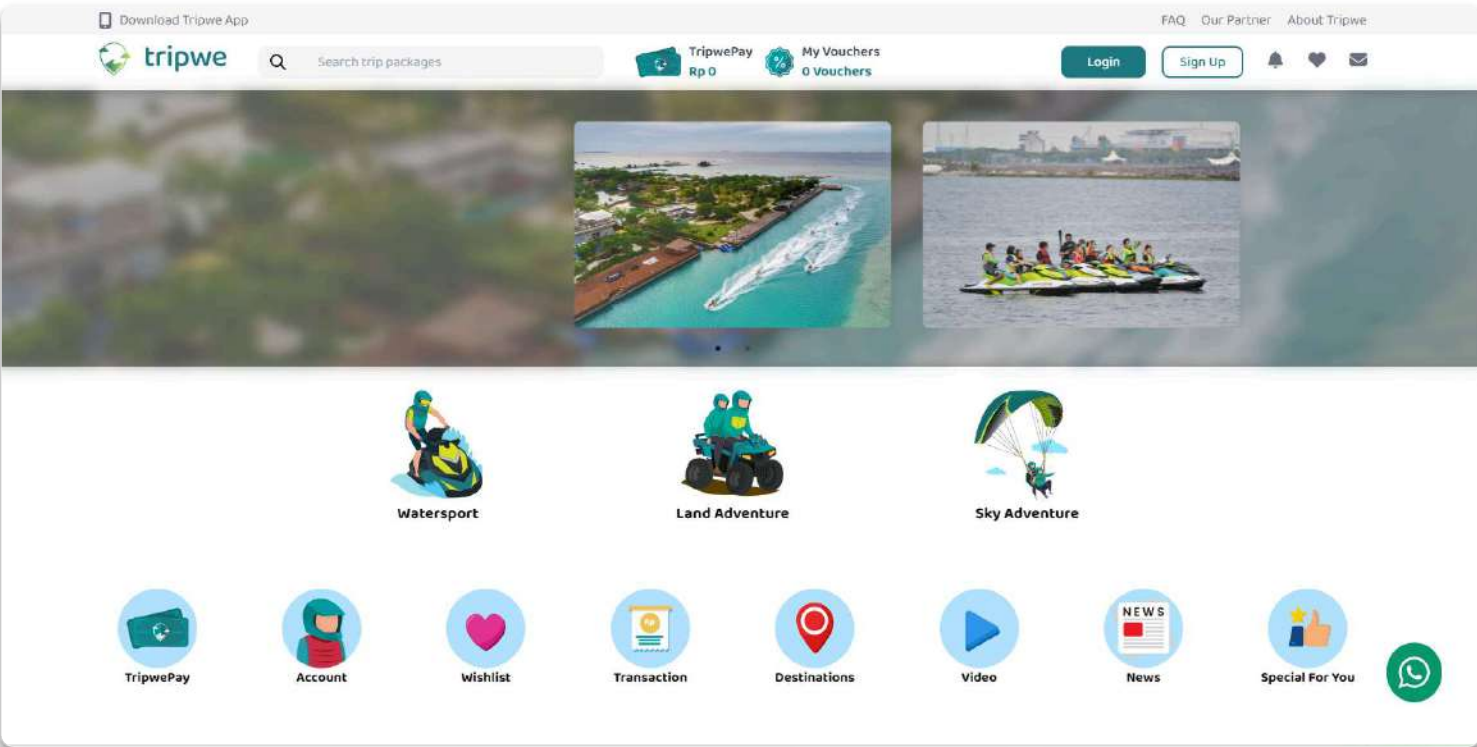

Ekspor Yuk Application

A mobile application designed to help users access export-related information and services through an intuitive mobile experience. Built using Flutter, Provider, and GraphQL to provide efficient data management.

Sola Gracia Accounting Application

A web-based accounting and employee management application used to manage employee data, financial records, and daily business operations. Built using Laravel 9 and Bootstrap.

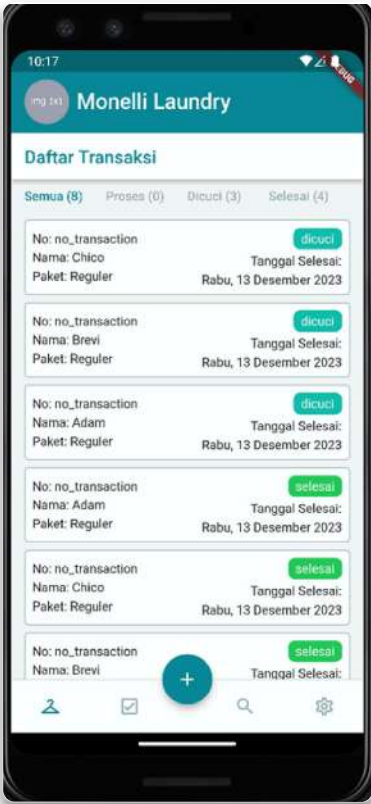

Tripwe Marketplace

A travel marketplace platform that enables users to browse travel packages, make reservations, and complete online transactions. The application includes user authentication using Laravel Passport, payment gateway integration through the bank's API, and booking management features. Built using Vue.js, Tailwind CSS, and Laravel.

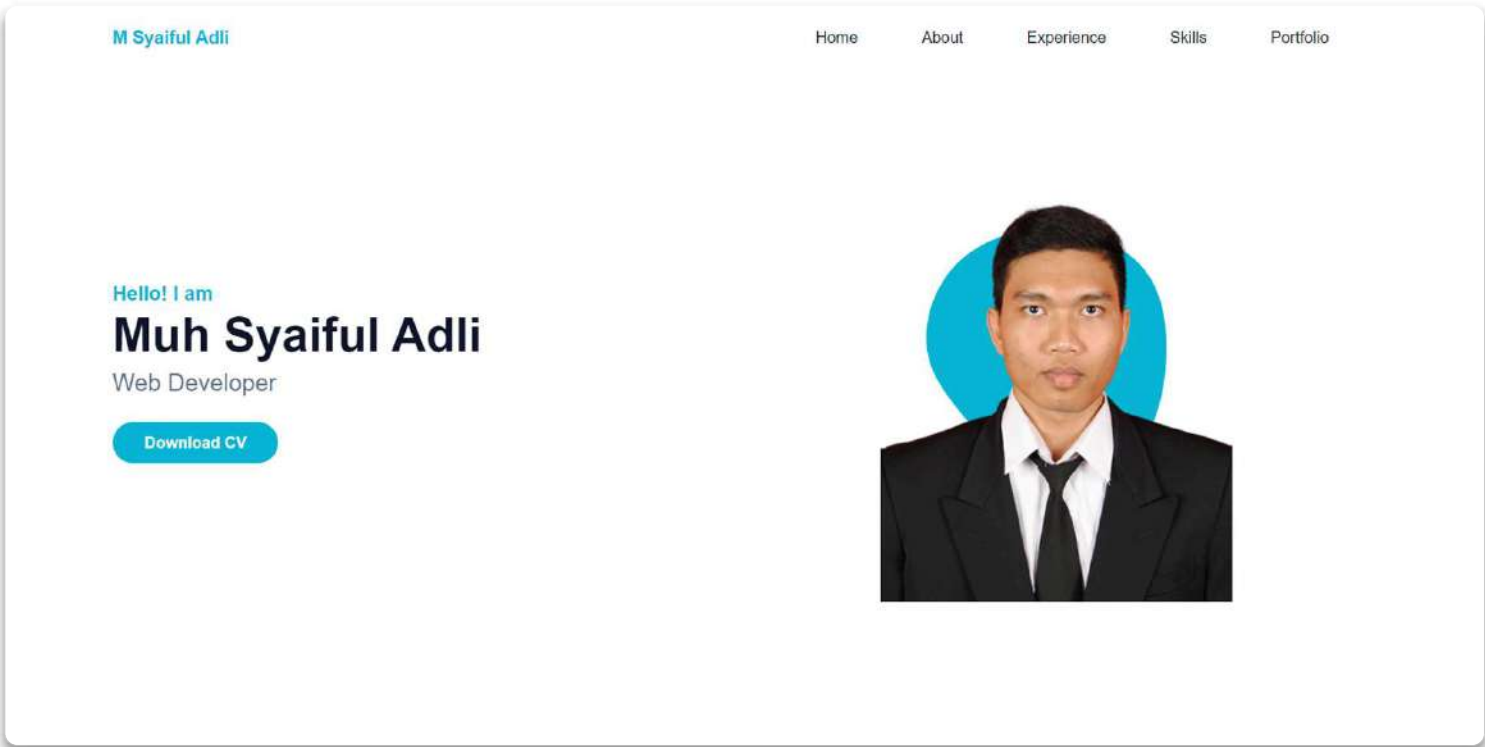

yskk.org Website

An official website for Yayasan Satu Karsa Karya that provides information about the organization, its programs, activities, and latest news. Built using Laravel 5 and Bootstrap.

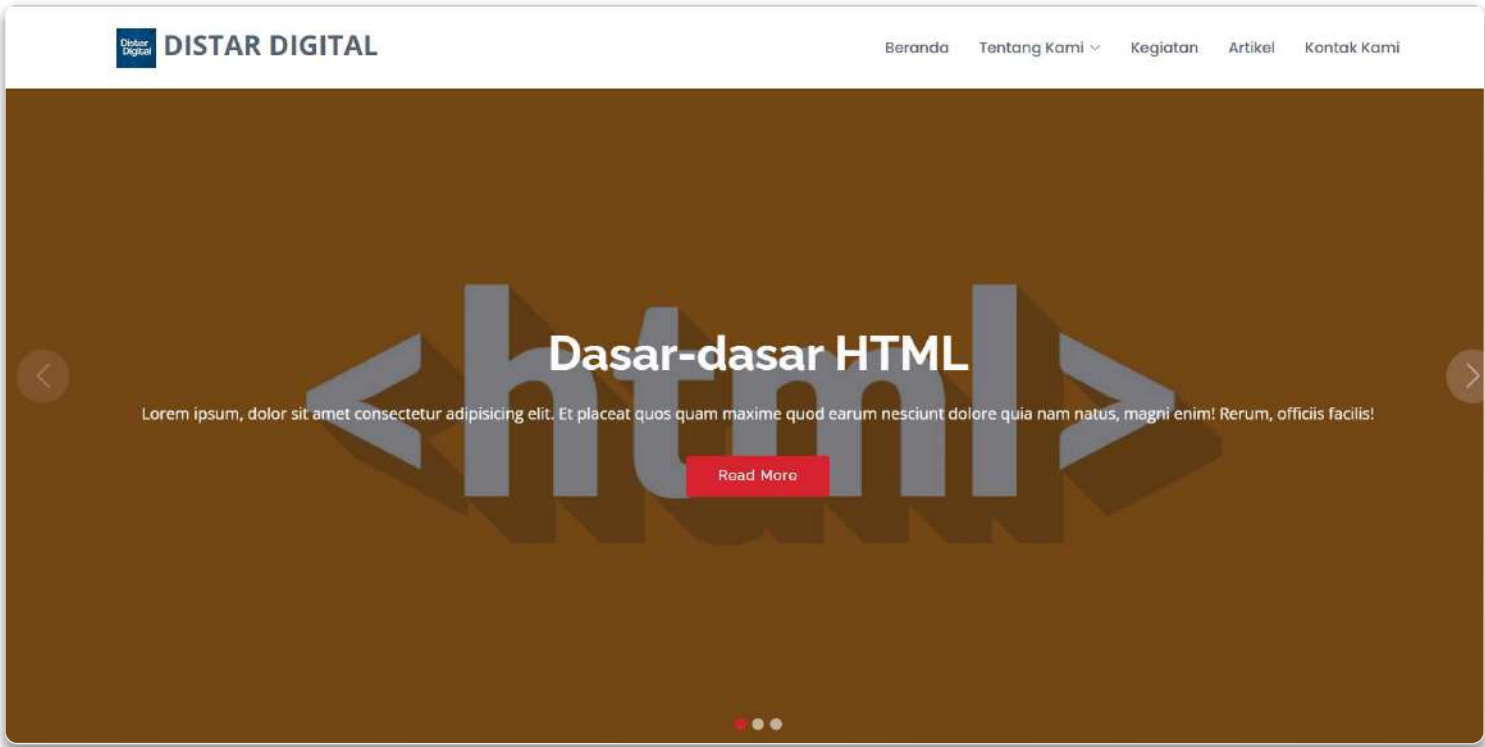

Laundry App

A laundry management application designed to simplify laundry business operations. The application supports customer management, order tracking, service management, and transaction monitoring. Built using Flutter, GetX, and SQLite

Personal Portfolio Website

A responsive portfolio website created to showcase professional experience, technical skills, and software development projects. Built using React.js and Tailwind CSS.

Another Project in My Localhost

I am also actively developing personal and experimental projects, including company profile websites, marketplace platforms, mobile applications such as note-taking and financial record apps, games built with Godot, and workflow automation solutions using n8n and Telegram bots.
